I. Create suited image size with LED Sign.

Understanding of Module and Model Before work

i. Module

A Module is usually made up of 16 pixel X16 pixel, 256 dots in a square

ii. Configuration of Model

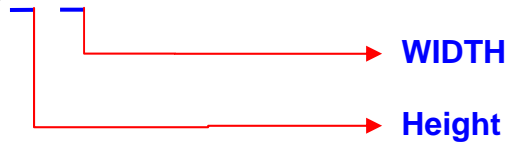

If the Model produced by 1 row X 6 columns;

	Height	Width
Row & Column	1	6
Pixel	16	16
Total Pixel	16	96

Therefore, the screen size of model is 16X96 pixel format, then the format of file you want to create display image shall be 16x96 pixels

Example)

IL320RpG_0106

II. Create BMP file

Recommended software;

- Using “Adobe Photoshop” or other design tool that you prefer to.
- Should create with right pixel format.
- When it save, should select file format for windows and Depth for 24 bit.

Should use right color

- R : FF0066
- G : FFFF66
- Y : 00F666

Example;

III. Create GIF animated image

If you finished the image work with Adobe Photoshop, now you are ready to make GIF animated image by Adobe image ready.

Example)
